

## CS 171/CSCI E-64: Visualization

### Homework 2, Group Reflections

James Goodspeed – jgoodsp@fas.harvard.edu

I had the assistance of Devin Shackle with reviewing my submission for Homework #2.

There were two things that Devin helped me with:

1. **API\_Scraper.py:** I originally was limiting the number of hash tags to a max of three to match the sample output, but as he pointed out this was not in the homework spec so I just commented it out (lines 90 & 91).
2. **Project Proposal:** Devin gave me some additional ideas on potential visualizations I could use for my project which I included at the end of the document.
